When solving a one step equation like this, we do the inverse operation to isolate the variable. In this case, we have  $3x = 9$ , so we divide both sides by 3 to get  $x = 3$ .  $3x = 9$   $(3x)/3 = (9)/3$

Example Question #7 : One Step Equations With Integers. To solve this equation, you must isolate the variable. In order to do this, do the opposite operation (division) to move the 9 to the other side of the equation. Keep in mind you must do the same step on each side of the equation every time you change something.
