A measurement system is an information system which presents an observer with a numerical value corresponding to the vari-able being measured. A given system may contain four types of element: sensing, signal conditioning, signal processing and data presentation elements. The book is divided into three parts. Part A(Chapters 1 to 7)examines general systems principles.

Solution: According to the text book, the solution should be... E (400) = 20869×10−6 V = 400 K ⇒ K = 20869 400 V/ C = 52.17 μV/ C. This gives the equation for the ideal straight line as: E L (T) = 52.17·T (in μV). However, the example in the book is wrong, so a better solution would be based on E (400) = −22131×10−6 V, which gives K = −22131
